Career Objective:

To pursue a career in a healthy and creative atmosphere where I can expand and apply my skills and knowledge effectively for the organization's growth.

PROJECTS

➤ Motion Controlled Virtual Mouse

- Developed a real-time application using Python, OpenCV & other libraries, designed to control the **mouse functions** using **hand gestures**.
- My role was to write the code for the mouse functions and to develop the **.exe** and **setup**.

➤ Student Management System

- A web application to store and manage student data which works as a **document generator**.
- **Tech stack** used: HTML, CSS, Python's Flask web framework and SQL database.
- My role was to handle the **backend part** of this application which involves the code for the document generator. Also contributed in the **front-end development** of this web app.
